

# Multiplication Bingo (Easy Facts)

**Family Note** Today the class learned to play *Multiplication Bingo*. This game is a good way to practice the multiplication facts. Ask your child to show you how to play the game; then play a couple of games. When your child is ready to practice harder facts, use the cards and list of numbers on the next page. Encourage your child to keep a record of the facts he or she misses.

*Keep this Home Link at home.*

- Materials**
- number cards 1–6 and 10 (4 of each)
  - 8 pennies or other counters for each player
  - game mat for each player

**Players** 2 or 3

## Directions

1. Write each of the following numbers in any order in one of the squares on a game mat: 1, 4, 6, 8, 9, 12, 15, 16, 18, 20, 24, 25, 30, 36, 50, 100.
2. Shuffle the number cards. Place the cards facedown on the table.
3. Take turns. When it is your turn, take the top 2 cards and call out the product of the 2 numbers. If the other players do not agree with your answer, check it using a calculator.
4. If your answer is correct and the product is a number on your grid, place a penny or a counter on that number.
5. If your answer is incorrect, you lose your turn.
6. The first player to get 4 counters in a row, column, or diagonal or 8 counters on the game mat calls out *Bingo!* and wins the game.

If all the cards are used before someone wins, shuffle the cards again and keep playing.

# Multiplication Bingo (All Facts)

Follow the same rules as for *Multiplication Bingo*, with the following exceptions:

- ◆ Use a deck of number cards with 4 cards each for the numbers 2 through 9.
- ◆ Write each of the numbers in the list in one of the squares on the grid. Don't write the numbers in order.

### List of numbers

24	35	48	63
27	36	49	64
28	42	54	72
32	45	56	81

Record the facts you miss. Be sure to practice them.
