Many Names for Numbers

1. Write five names for 64.

64

2. Write five names for 132.

132

3. Pretend that the 4-key on your calculator is broken. Write six ways to display the number 40 on the calculator without using the 4-key. Try to use different numbers and operations.

Example: $2 \times 2 \times 10$

Try This

4. Now pretend that all the keys on your calculator work except for the 3-key and the 6-key. Write six ways to display the number 36 without using these keys.

Practice

5. $20 + 60 = \underline{\hspace{2cm}}$

6. $\underline{\hspace{2cm}} = 60 + 90$

7. $\underline{\hspace{2cm}} = 80 - 30$

8. $110 - 40 = \underline{\hspace{2cm}}$
